

HIGH-LINE

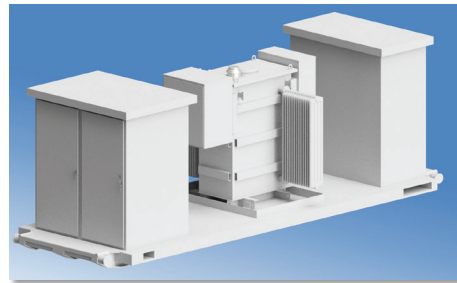

Expertise & Equipment to Utilize Utility Power

APPLICATION

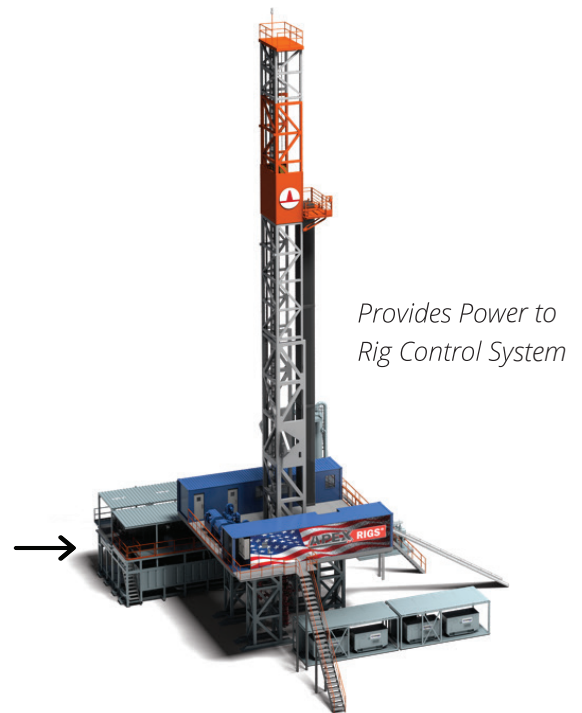

Patterson-UTI's high-line product offering enables customers to reach zero on-site emissions. We specialize not just in advanced rig capabilities, but also in custom substation design, engineering, and manufacturing for high-line power delivery. Our in-house experience through Current Power brings years of innovation and service to our customers. With high-line infrastructure continuing to expand it delivers a very economical solution to many customers while further aligning with their emission goals and objectives.

Utility Power

Substation Skid with
Transformer and Filters

Provides Power to
Rig Control System

FEATURES

- Switchgear is installed to allow the rig to easily convert back to generator power if utility service is not available
- In-house Current Power controls design, engineering, and packaging of systems
- Highly customizable transfer schemes

BENEFITS

- Zero on-site emissions
- Years of experience utilizing utility power with step-down transformers and harmonic filters
- Reduction in ambient noise ideal for sensitive drilling environments
